

# NETGEAR ReadyNAS OS 6 Rack-Mount Storage Systems

## Hardware Manual

### Models:

2120

April 2013  
202-11272-01

350 East Plumeria Drive  
San Jose, CA 95134  
USA

### Support

Thank you for purchasing this NETGEAR product.

After installing your device, locate the serial number on the label of your product and use it to register your product at <https://my.netgear.com>. You must register your product before you can use NETGEAR telephone support.

NETGEAR recommends registering your product through the NETGEAR website. For product updates, additional documentation, and support, visit <http://support.netgear.com>.

Phone (US & Canada only): 1-888-NETGEAR.

Phone (Other Countries): Check the list of phone numbers at <http://support.netgear.com/general/contact/default.aspx>.

### Trademarks

NETGEAR, the NETGEAR logo, and Connect with Innovation are trademarks and/or registered trademarks of NETGEAR, Inc. and/or its subsidiaries in the United States and/or other countries. Information is subject to change without notice. © NETGEAR, Inc. All rights reserved.

# Getting Started

---

# 1

Congratulations on your purchase of a NETGEAR ReadyNAS® storage system. This manual describes the physical features of the ReadyNAS OS 6 rack-mount storage systems.

This chapter contains the following sections:

- *Additional Documentation*
- *Setup Location*
- *Supported Operating Systems*
- *Supported Browsers*
- *Diskless Storage System*

## Additional Documentation

For detailed information about configuring, managing, and using your ReadyNAS storage system, see the *ReadyNAS OS 6 Software Manual*, which is available at

<http://support.netgear.com/product/ReadyNAS-OS6>.

NETGEAR maintains a community website that supports ReadyNAS products. Visit <http://www.netgear.com/readynas> for reviews, tutorials, a comparison chart, software updates, documentation, an active user forum, and much more.

## Setup Location

Your ReadyNAS storage system is intended for installation in a restricted access location (dedicated equipment rooms, service closets, and the like) only.

Keep the following considerations in mind as you install your system:

- **Ambient operating temperature.** If the system is installed in a closed or multiunit rack assembly, the ambient operating temperature of the rack environment might be greater than the ambient temperature of the room. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum rated ambient temperature. See [Appendix A, Defaults and Technical Specifications](#).
- **Reduced airflow.** Mount the equipment into a rack so that the amount of airflow required for safe operation is not compromised.
- **Mechanical loading.** Mount the equipment into a rack so that a hazardous condition does not arise due to uneven mechanical loading.
- **Circuit overloading.** Consider the equipment's connection to the power supply circuitry and the effect that any possible overloading of circuits might have on overcurrent protection and power supply wiring. Consider equipment nameplate ratings when addressing this concern.
- **Reliable grounding.** This product requires reliable grounding to be maintained at all times. To ensure this, ground the rack itself. Pay particular attention to power supply connections other than the direct connections to the branch circuit (for example, the use of power strips).
- **Clearance.** Leave enough clearance in front of the rack (about 25 inches) to enable you to open the front door completely and in the back of the rack (about 30 inches) to allow for sufficient airflow and ease in servicing.

## Supported Operating Systems

The ReadyNAS storage system is supported on the following systems:

- Microsoft Windows 8
- Microsoft Windows 7
- Microsoft Windows Vista
- Apple Mac OS X 10.5 Leopard or later
- Linux, UNIX, Solaris
- Apple iOS
- Google Android

## Supported Browsers

The ReadyNAS local admin page supports the following browsers:

- Microsoft Internet Explorer 9.0+
- Apple Safari, 5.0+
- Google Chrome 20+
- Mozilla Firefox 14+

If you have difficulty accessing the local admin page or if you notice unexpected behavior, try using another browser. For more information about the ReadyNAS local admin page, see the *ReadyNAS OS 6 Software Manual*.

## Diskless Storage System

If you purchased a ReadyNAS storage system without a preinstalled disk drive or drives, you must add at least one disk your system before you use the system. You can add a 3.5-inch hard disk drive, a 2.5-inch hard disk drive, or a 2.5-inch solid-state drive to an empty disk bay. For information about how to install a disk, see [Add a Disk](#) on page 19.

Use only supported SATA hard disk drives (HDDs) or solid-state drives (SSDs) in your ReadyNAS storage system. If you use disks that are not supported, NETGEAR technical support will not provide assistance. For a list of supported disks, see the NETGEAR Hardware Compatibility List at <http://www.netgear.com/readynas-hcl>.

If you are adding a previously formatted disk to your storage system, see the instructions in [Previously Formatted Disks](#) on page 17.

## 2. ReadyNAS 2120

---

# 2

This chapter describes the physical features of the ReadyNAS 2120. It includes the following sections:

- *Front Panel*
- *Rear Panel*
- *Status Information*
- *Power On and Shut Down*
- *Boot Menu*

## Front Panel

The following figure shows the front panel of the ReadyNAS 2120.

**Figure 1. Front panel**

1. Drive bays
2. Control panel
3. Mounting bracket
4. Fault LED
5. Disk activity LED
6. Disk tray (For more information, see [Disk Tray](#) on page 16.)

The following figure shows the control panel in more detail.

**Figure 2. Control panel**

1. USB 2.0 port
2. Reset button
3. Error LED
4. LAN 1 and LAN 2 LEDs
5. Power LED
6. Power button

## Rear Panel

The following figure shows the rear panel of the ReadyNAS 2120.

**Figure 3. Rear panel**

1. Power cable socket
2. Power switch
3. Disk exhaust fans
4. E-SATA ports
5. USB 3.0 ports
6. LAN ports with LED status indicators

## Status Information

You can obtain information about the status of your ReadyNAS 2120 by reviewing the LEDs listed in the following table.

**Table 1. Status information**

Indicator	Description
Disk activity LED (disk tray, top)	<p>The Disk activity LEDs have these states:</p> <ul style="list-style-type: none"> <li>• <b>Solid blue.</b> A disk is present.</li> <li>• <b>Blinking.</b> The disk is active.</li> <li>• <b>Off.</b> No disk is present.</li> </ul>
Fault LED (disk tray, bottom)	<p>The Fault LEDs have these states:</p> <ul style="list-style-type: none"> <li>• <b>Solid red.</b> The disk was removed, failed, or is resynchronizing.</li> <li>• <b>Off.</b> No disk is active.</li> </ul>
Error LED (front panel)	<p>The Error LED has these states:</p> <ul style="list-style-type: none"> <li>• <b>Solid red.</b> The system needs attention. Use the local admin page to determine the problem. For more information, see the <i>ReadyNAS OS 6 Software Manual</i>, which is available at <a href="http://support.netgear.com/product/ReadyNAS-OS6">http://support.netgear.com/product/ReadyNAS-OS6</a>.</li> <li>• <b>Off.</b> The system is healthy.</li> </ul>
LAN 1 and LAN 2 LEDs (front panel)	<p>The LAN LEDs have these states:</p> <ul style="list-style-type: none"> <li>• <b>Solid blue.</b> An Ethernet cable is connected.</li> <li>• <b>Blinking.</b> The Ethernet link is active.</li> <li>• <b>Off.</b> There is no Ethernet connection.</li> </ul>
LAN port LEDs (rear panel)	<p>Two LED status indicators are built into each LAN port. One LED is green and one is amber. They indicate port speed and activity as follows:</p> <ul style="list-style-type: none"> <li>• <b>Green on, amber off.</b> 1000 Mbps connection speed, no activity.</li> <li>• <b>Green blinking, amber off.</b> 1000 Mbps connection speed, activity.</li> <li>• <b>Green off, amber on.</b> 10 Mbps or 100 Mbps connection speed, no activity.</li> <li>• <b>Green off, amber blinking.</b> 10 Mbps or 100 Mbps connection speed, activity.</li> <li>• <b>Green off, amber off.</b> No connection.</li> </ul>
Power LED (front panel)	<p>The Power LED has these states:</p> <ul style="list-style-type: none"> <li>• <b>Solid green.</b> The system is powered on.</li> <li>• <b>Blinking.</b> The system is powering on or powering off.</li> <li>• <b>Off.</b> Power is not supplied to the system.</li> </ul>

## Power On and Shut Down

This section describes how to power on and shut down your system. If you need to shut down the system, use one of the preferred shutdown methods whenever possible.

### Power On

➤ **To power on the system:**

1. Connect the system to a power supply.
2. Flip the Power switch to the On position.

The Power switch is located on the back panel of the system.

**Note:** Depending on the system's last power state, the system might power on automatically. For more information, see *Power State* on page 13.

3. If necessary, press the **Power** button on the front panel of the system.

The system powers on.

### Preferred Shutdown

You can gracefully shut down your system by using the Power button or the ReadyNAS local admin page.

For information about how to gracefully shut down your system using the ReadyNAS local admin page, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

➤ **To gracefully shut down your system using the Power button:**

1. Press the **Power** button on the front panel of the system.

The Power LED blinks, prompting you to confirm the shutdown.

2. Press the **Power** button again.

The system shuts down gracefully.

### Forced Shutdown

Perform a forced shutdown only if the storage system is not responding.

➤ **To perform a forced shutdown:**

Flip the Power switch to the Off position.

The Power switch is located on the back panel of the system.

The system shuts down.

## Power State

If the power supply is interrupted due to a power failure, the system returns to its last state once the power supply is restored:

- If the system was powered on at the time of the power failure, the system powers on when the power supply is restored.
- If the system was powered off at the time of the power failure, the system remains off when the power supply is restored.

## Boot Menu

Use the boot menu to restart or troubleshoot your ReadyNAS storage system. Your storage system has the following boot modes:

- **Normal.** Initiates a normal boot process, just like booting using the Power button.
- **Factory default.** Initiates a short disk test that takes approximately 5 minutes. After the disk test, a 10-minute time-out period begins. During the 10-minute time-out period, you can choose to power off the storage system without causing any data loss, and the factory default process is canceled. If you choose not to power off the storage system, after the 10-minute time-out period, the factory default process begins.

### **WARNING:**

**The factory default reboot process resets the storage system to factory settings, erases all data, resets all defaults, and reformats the disk to X-RAID2.**

---

**Note:** To start the factory default process immediately, press the **Reset** button during the 10-minute time-out period.

---

- **OS reinstall.** Reinstalls the firmware from the internal flash to the disks. Use the OS reinstall boot mode when the system crashes and corrupts some configuration files. OS reinstall boot mode also resets some settings on your storage system, such as Internet protocol settings and the administrator password, to defaults.
- **Tech support.** Boots into a low-level diagnostic mode. Use the tech support boot mode only when instructed to do so by a NETGEAR technical support representative.
- **Volume read only.** Mounts a volume as read-only. Use this option when you are attempting to rescue data off a disk during a disaster recovery.
- **Memory test.** Performs a memory test. The pass or fail result is reported using the storage system's LEDs. Contact a NETGEAR technical support representative to interpret memory test results.

- **Test Disk.** Performs an offline full disk test. This process can take four hours or more, depending on the size of your disks. Any problems are reported in the system logs, which you can view using the local admin page. For more information about viewing the system logs, see the *ReadyNAS OS 6 Software Manual*.

➤ **To access the boot menu:**

1. Power off your system.
2. Using a straightened paper clip, press and hold the **Reset** button.
3. Press the **Power** button on the front panel of the system.

The system powers on.

4. Continue to press the **Reset** button until the Power button is solid green and the Error LED, LAN 1 LED, and LAN 2 LED are blinking.
5. Press and release the **Reset** button to scroll through the boot menu modes.

The storage system shows the boot mode options using the LEDs, as described in the following table:

Boot Mode	Status Indicator				
	Description	Error LED	LAN 1 LED	LAN 2 LED	Power LED
Boot menu	Error LED and both LAN LEDs blink. Power LED lights.				
Normal	LAN 2 and Power LEDs light.				
Factory default	LAN 1 and Power LEDs light.				
OS reinstall	Both LAN LEDs and the Power LED light.				
Tech support	Error and Power LEDs light.				
Volume read only	Error, LAN 2, and Power LEDs light.				
Memory test	Error, LAN 1, and Power LEDs light.				
Test disk	All four LEDs light.				

Legend:

- Solid:   
- Blinking:   
- Off: 

6. Press and hold the **Reset** button to confirm your boot menu selection.

The system boots in the selected boot mode.

This chapter describes how to reformat, add, and replace disks in your ReadyNAS OS 6 storage system.

For information about configuring disks on your storage system, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

This chapter includes the following topics:

- *Disk Tray*
- *Supported Disks*
- *Previously Formatted Disks*
- *Add a Disk*
- *Replace a Disk*

## Disk Tray

The following figure shows the features of the disk tray.

**Figure 4. Disk tray**

1. Disk tray handle
2. Disk tray release latch
3. Fault LED
4. Disk activity LED
5. Disk screw holes (for 3.5-inch disk)
6. Disk screw holes (for 2.5-inch disk)
7. Removable plastic air blocker

### **IMPORTANT:**

To maintain adequate airflow, follow these precautions concerning disk trays:

- Make sure that all disk trays remain in the drive bays, even if no disk is installed in the tray.
- Install the plastic air blocker in empty disk trays.

## Supported Disks

Use only supported SATA hard disk drives (HDDs) or solid-state drives (SSDs) in your ReadyNAS storage system. If you use disks that are not supported, NETGEAR technical support will not provide assistance. For a list of supported disks, see the NETGEAR Hardware Compatibility List at <http://www.netgear.com/readynas-hcl>.

## Previously Formatted Disks

This section describes how to use previously formatted disks with your ReadyNAS OS 6 storage system.

Previously formatted disks must appear on the NETGEAR Hardware Compatibility List, which is available at <http://www.netgear.com/readynas-hcl>.

### Reformat Previously Formatted Disks

If you want to use disks that were previously formatted for an operating system other than ReadyNAS OS 6 (for example, Windows or RAIDiator), you must reformat the disks.

If you want to use disks from another ReadyNAS OS 6 storage system, see *Migrate a Volume* on page 18.

---

**Note:** If you try to use previously formatted disks in a system that does not contain any other disks, the system does not boot and ReadyCLOUD does not discover your device. If you use RAIDar to discover your device, RAIDar displays a “Corrupt Root” error message.

If you try to use previously formatted disks in a system that already contains usable disks, the system does not reformat or use the previously formatted disks. Any data on the previously formatted disks remains intact.

---

The following instructions describe how to reformat previously formatted disks in a ReadyNAS OS 6 system. This procedure assumes that the system does not contain any other disks.

➤ **To reformat previously formatted disks with a diskless ReadyNAS OS 6 system:**

1. Gracefully shut down the storage system.

For information about how to gracefully shut down your system, see the Preferred Shutdown section of the chapter that describes your system.

2. Install the disk.

For more information, see [Add a Disk](#) on page 19.

3. Reset the system to its factory default settings.

**WARNING:**

**This process erases all data and reformats all disks into a single X-RAID2 volume. If you want to preserve the data on the disks, you must back up the data to an external drive before using the disks in your ReadyNAS storage system.**

For information about how to reset the system to its factory default settings, see the Boot Menu section of the chapter that describes your system.

The disk is reformatted and becomes available for use with your ReadyNAS OS 6 storage system.

## Migrate a Volume

You can migrate a volume from one ReadyNAS OS 6 storage system to another, as long as you migrate every disk in the volume. For example, if you want to migrate a volume that contains two disks, you must add both disks to the new system. If you add only part of a volume to the new system, the system recognizes the disk as a degraded volume.

If your ReadyNAS storage system is operating with one or more disks, you can add disks while the system is running. The new system recognizes the migrated volume and its data. For more information about adding a disk while the system is running, see [Add a Disk](#) on page 19.

If your ReadyNAS storage system does not have any disks installed, perform the following procedure.

➤ **To migrate a volume to a diskless ReadyNAS OS 6 system:**

1. Gracefully shut down the new (diskless) storage system.

For information about how to gracefully shut down your system, see the Preferred Shutdown section of the chapter that describes your system.

2. Remove each disk in the volume from the old system.
3. Install each disk in the volume into the new storage system.

For more information, see [Add a Disk](#) on page 19.

4. Turn on the new system by pressing the **Power** button.

The new system recognizes the migrated volume and its data.

## Add a Disk

You can add a 3.5-inch hard disk drive, 2.5-inch hard disk drive, or a 2.5-inch solid-state drive to an empty disk bay.

If you want to add a previously formatted disk to your storage system, see the instructions in *Previously Formatted Disks* on page 17.

➤ **To add a 3.5-inch hard disk drive (HDD):**

**1.** Determine whether you need to shut down your system:

- If you are adding disks to a diskless system, gracefully shut down the system.

For information about how to gracefully shut down your system, see the Preferred Shutdown section of the chapter that describes your system.

- If your system is operating with one or more disks, you can add disks while the system is running. You do not need to shut down the system.

**2.** Press the disk tray release latch.

The tray handle pops out.

**3.** Pull out the disk tray.

4. Remove the plastic air blocker from the disk tray.

5. Place the new 3.5-inch HDD in the disk tray.
6. Secure the HDD in the tray using the screws that came with your storage system.

Make sure that the hard disk connectors face the interior of the disk tray when you assemble the disk.

7. Slide the disk tray back into the drive bay of the system.
8. Press the disk tray handle until it latches closed.

The disk tray is secured in the drive bay.

9. If necessary, turn on your system by pressing the **Power** button.

If the disk that you added was not previously formatted, the system uses the disk in one of the following ways:

- If you are adding the disk to a system that uses X-RAID2, the system automatically determines whether the disk is used for protection or storage. The new disk is incorporated in the background while you continue to use your system.
- If you are adding the disk to a system that uses Flex-RAID, the disk becomes available for use. You use the local admin page to manually configure the new disk.

For more information about X-RAID2, Flex-RAID, and using the local admin page, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

➤ **To add a 2.5-inch hard disk drive (HDD) or 2.5-inch solid-state drive (SSD):**

**1.** Determine whether you need to shut down your system:

- If you are adding disks to a diskless system, gracefully shut down the system.

For information about how to gracefully shut down your system, see the Preferred Shutdown section of the chapter that describes your system.

- If your system is operating with one or more disks, you can add disks while the system is running. You do not need to shut down the system.

**2.** Press the disk tray release latch.

The tray handle pops out.

**3.** Pull out the disk tray.

**4.** Remove the plastic air blocker from the disk tray.

**5.** Place the new 2.5-inch HDD or SSD in the disk tray.

6. Secure the drive in the tray using the screws that came with your storage system.

Make sure that the hard disk connectors face the interior of the disk tray when you assemble the disk.

7. Slide the disk tray back into the drive bay of the system.
8. Press the disk tray handle until it latches closed.

The disk tray is secured in the drive bay.

9. If necessary, turn on your system by pressing the **Power** button.

If the disk that you added was not previously formatted, the system uses the disk in one of the following ways:

- In a system that uses X-RAID2, the system automatically determines whether the disk is used for protection or storage. The new disk is incorporated in the background while you continue to use your system.

- In a system that uses Flex-RAID, the disk becomes available for use. You use the local admin page to manually configure the new disk.

For more information about X-RAID2, Flex-RAID, and using the local admin page, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

## Replace a Disk

If your volumes use a protected RAID configuration, your system can recover from the failure of a disk. When you replace the failed disk, the system rebuilds the volume using the new disk and no data from the volume is lost.

Each disk tray includes a Fault LED that turns solid red when its disk fails. You can also use the local admin page to set up email alerts that notify you when a disk fails. In addition, the local admin page provides information about the failed disk.

For information about RAID configurations, setting up email alerts, using the local admin page, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

ReadyNAS supports hot-swap drive bays, so you do not need to power down your storage system when replacing a disk.

If you are replacing a disk with a previously formatted disk, see the instructions in *Previously Formatted Disks* on page 17.

### **WARNING:**

**Replace one disk at a time. Wait for the volume to resynchronize your data before replacing another disk. If you attempt to replace more than one disk at a time, the system crashes.**

➤ **To replace a 3.5-inch hard disk drive (HDD):**

1. Press the disk tray release latch.

The disk tray handle pops out.

2. Pull out the disk tray.
3. Remove the screws and the old 3.5-inch HDD from the tray.
4. Place the new 3.5-inch HDD in the disk tray.
5. Secure the HDD in the tray using the screws.

Make sure that the hard disk connectors face the interior of the disk tray when you assemble the disk.

6. Slide the disk tray back into the drive bay of the system.
7. Press the disk tray handle until it latches closed.

The disk tray is secured in the drive bay.

If the volume that contained the failed disk uses a protected RAID configuration, the system automatically resynchronizes the volume using the new disk. Resynchronization might take several hours, depending on the disk size. You can continue to use your storage system, although access is slower until the volume resynchronization finishes.

For more information about RAID configurations, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

➤ **To replace a 2.5-inch hard disk drive (HDD) or 2.5-inch solid-state drive (SSD):**

1. Press the disk tray release latch.

The disk tray handle pops out.

2. Pull out the disk tray.
3. Remove the screws and the old 2.5-inch HDD or SSD from the tray.
4. Place the new 2.5-inch HDD or SSD in the disk tray.
5. Secure the drive in the tray using the screws.

Make sure that the hard disk connectors face the interior of the disk tray when you assemble the disk.

6. Slide the disk tray back into the drive bay of the system.
7. Press the disk tray handle until it latches closed.

The disk tray is secured in the drive bay.

If the volume that contained the failed disk uses a protected RAID configuration, the system automatically resynchronizes the volume using the new disk. Resynchronization

might take several hours, depending on the disk size. You can continue to use your storage system, although access is slower until the volume resynchronization finishes.

For more information about RAID configurations, see the *ReadyNAS OS 6 Software Manual*, which is available at <http://support.netgear.com/product/ReadyNAS-OS6>.

## 4. Maintenance

---

# 4

This chapter describes how to perform maintenance activities like replacing a fan or on-board battery. It includes the following topics:

- *Access the Inside of the Storage System*
- *Replace a Fan*
- *Replace the On-board Battery*

## Access the Inside of the Storage System

You need to access the inside of the system to replace a fan or on-board battery.

### **WARNING:**

Ensure that the chassis cover is in place when the system is operating to allow proper cooling. If you do not strictly follow this practice, out-of-warranty damage to the system can occur.

#### ➤ To access the inside of a 2120:

1. If your system is mounted in a rack, grasp the two handles on either side and pull the system straight out until it locks.

The system is locked when you hear a click sound.

2. Remove the four screws holding the top cover in place.

3. Slide the top cover back.

4. Lift the top cover from the chassis.

You now have full access to the inside of the system.

## Replace a Fan

If a fan fails, the remaining fans ramp up to full speed, the Error LED on the control panel lights, and an email alert is sent to the system administrator. Replace a failed fan as soon as possible. Remove the top chassis cover while the system is still running to determine which fan failed.

Fans are hot-pluggable, so you do not need to power down your system when replacing a fan.

### ➤ To replace a fan on a 2120:

1. Remove the chassis cover.

For more information, see [Access the Inside of the Storage System](#) on page 30.

2. Disconnect the fan's power connections.

3. Pull up on the fan gently to remove it from the housing.

4. Remove the four pegs that hold the fan in the housing.

5. Insert the four pegs into holes in the replacement fan.
6. Insert the replacement fan into the housing.
7. Make sure that the grooves in the pegs fit into the housing and hold the fan in place.

8. Connect the replacement fan's power connections.

If the system power is on, the hot-plug feature causes the fan to start immediately.

## Replace the On-board Battery

Replace the battery only with the same or an equivalent type recommended by NETGEAR. Dispose of used batteries according to the manufacturer's instructions.

### **DANGER:**

Installing the on-board battery upside down, which reverses its polarities, creates a risk of explosion. Take care to install the battery correctly.

- **To replace the battery of a 2120:**
  1. Open the system and locate the battery holder.
  2. Remove the old battery.

3. Install the new battery.

Take care to install the new battery with the correct side up.

# A Defaults and Technical Specifications

---

This appendix includes the following sections:

- *Factory Default Settings*
- *ReadyNAS 2120 Technical Specifications*
- *Safety Warnings*

## Factory Default Settings

The following table lists factory default settings for ReadyNAS OS 6 rack-mount storage systems.

**Table 2. ReadyNAS OS 6 factory default settings**

Feature		Default
Login		
	Default IP address	The default IP address for the ReadyNAS is assigned by the local router (DHCP server).  If a router does not assign an IP address, the ReadyNAS defaults to the IP address <code>https://169.254.x.x</code> , where the last two octets are randomly generated based on the system's MAC address.
	Admin user name (case-sensitive)	admin
	Admin login password (case-sensitive)	password
Management		
	System configuration	ReadyNAS local admin page web-based configuration and status monitoring
	Discovery and multi-storage system status monitoring utility	ReadyCLOUD for Windows, Mac, and Linux
LAN Connections		
	MAC address	See product label
	MTU size	1500
	Ethernet port	Auto Sense 10/100/1000BASE-T, RJ-45
	LAN IP address	DHCP acquired

## ReadyNAS 2120 Technical Specifications

The ReadyNAS 2120 storage system meets the following technical specifications:

### General:

- Marvell Armada XP 1.2 GHz
- 2 GB memory
- Four bay storage
- Two E-SATA port
- One USB 2.0 port (front)
- Two USB 3.0 ports (back)
- Two LAN ports

### Physical dimensions (h x w x d):

- 43.5 x 430 x 308 mm (1.7 x 16.9 x 12.1 in.)

### Physical weight:

- 3.5 kg (8.89 lb) without disks

### Power consumption:

- BTU at full power supply utilization: 38 W
- In operation: 38 W
- Power off (Wake On LAN): 1.4 W
- Power off: 0.307 W

### Electrical:

- Internal 200 W server-rated AC power supply
- Input: 100–240V AC, 50/60 Hz

### Environmental requirements:

- Operating temperature: 0 to 40°C (32° to 104°F)
- Operating humidity: 20 to 80% relative humidity (non-condensing)
- Storage temperature: –20 to 70°C (–4 to 158°F)
- Storage humidity: 5 to 95% relative humidity (non-condensing)
- Software controlled 3 mm x 40 mm chassis cooling fan

### Certifications:

FCC Class B, CE Class B, RoHS, VCCI Class B

## Safety Warnings

1. The equipment contains no operator access areas and is certified for installation only by trained personnel, according to the installation instructions provided with each storage system.
2. Install the socket outlet near the equipment in an easily accessible location.
3. Observe the on-board battery precautions. Follow the battery replacement instructions explained in *Replace the On-board Battery* on page 33.

### **DANGER:**

**Replacing the battery with an incorrect type creates a danger of explosion. Replace the battery the same or an equivalent type recommended by NETGEAR only. Dispose of used batteries according to the manufacturer's instructions.**

**Installing the on-board battery upside down, which reverses its polarities, creates a risk of explosion. Take care to install the battery correctly.**

4. Connect the storage systems and their associated LAN connections only to equipment within the same building.
5. Slide or rail-mounted equipment is not to be used as a shelf or a work space. 

## Electrical Safety Precautions

Follow basic electrical safety precautions to protect yourself from harm and the ReadyNAS from damage:

- Be aware of the locations of the Power on/off switch on the chassis as well as the room's emergency power-off switch, disconnection switch, or electrical outlet. If an electrical accident occurs, you can then quickly remove power from the system.
- Do not work alone when working with high-voltage components.
- Always disconnect power from the system when removing or installing main system components, such as the main board or memory modules. When disconnecting power, first power down the system with the operating system and then unplug the power cords of all the power supply storage systems in the system.
- When working around exposed electrical circuits, ensure that another person who is familiar with the power-off controls is nearby to switch off the power if necessary.
- Use only one hand when working with powered-on electrical equipment. This is to avoid making a complete circuit, which will cause electrical shock. Use extreme caution when

using metal tools, which can easily damage any electrical components or circuit boards they come into contact with.

- Do not use mats designed to decrease static electrical discharge as protection from electrical shock. Instead, use rubber mats that have been specifically designed as electrical insulators.
- Use only power supply cords that include a grounding plug and plug them into grounded electrical outlets.

## General Safety Precautions

Follow these rules to ensure general safety:

- Keep the area around the ReadyNAS clean and free of clutter.
- See the technical specifications in this manual for details about your specific ReadyNAS storage systems.
- The ReadyNAS weighs approximately 82 pounds when fully loaded. When lifting the system, two people at either end should lift slowly with their feet spread out to distribute the weight. Always keep your back straight and lift with your legs.
- Place the chassis top cover and any system components that have been removed away from the system or on a table so that they will not accidentally be stepped on.
- While working on the system, do not wear loose clothing such as neckties and unbuttoned shirt sleeves, which can come into contact with electrical circuits or be pulled into a cooling fan.
- Remove any jewelry or metal objects from your body, which are excellent metal conductors that can create short circuits and harm you if they come into contact with printed circuit boards or areas where power is present.
- Replace the on-board battery only with the same battery or an equivalent type of battery recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

### **DANGER:**

**Installing the on-board battery upside down, which reverses its polarities, creates a risk of explosion. Take care to install the battery correctly.**

- Only trained service technicians can replace the self-resetting PTC (positive temperature coefficient) fuses on the main board, using only new fuses that are the same as or equivalent to the ones being replaced. Contact technical support for details and support.

## Electrostatic Discharge (ESD) Precautions

Electrostatic discharge (ESD) is generated by two objects with different electrical charges coming into contact with each other. An electrical discharge is created to neutralize this difference, which can damage electronic components and printed circuit boards. The following measures are generally sufficient to neutralize this difference before contact is made to protect your equipment from ESD:

- Use a grounded wrist strap designed to prevent static discharge.
- Keep all components and printed circuit boards (PCBs) in their antistatic bags until ready for use.
- Touch a grounded metal object before removing the board from the antistatic bag.
- Do not let components or PCBs come into contact with your clothing, which might retain a charge even if you are wearing a wrist strap.
- Handle a board by its edges only; do not touch its components, peripheral chips, memory modules, or contacts.
- When handling chips or modules, avoid touching their pins.
- Put the main board and peripherals back into their antistatic bags when not in use.
- For grounding purposes, make sure your computer chassis provides excellent conductivity between the power supply, the case, the mounting fasteners, and the main board.
- After accessing the inside of the system, close the system back up and secure it to the rack unit with the retention screws after ensuring that all connections have been made.

## Rack-Mount Precautions

Follow these rack-mount precautions:

- Ensure that the leveling jacks on the bottom of the rack are fully extended to the floor with the full weight of the rack resting on them.
- In single-rack installations, stabilizers should be attached to the rack. In multiple-rack installations, the racks should be coupled together.
- Always make sure the rack is stable before extending a component from the rack.
- You should extend only one component at a time; extending two or more simultaneously might cause the rack to become unstable.
- Determine the placement of each component in the rack *before* you install the rails.
- Install the heaviest components on the bottom of the rack first, and then work up.
- Use a regulating uninterruptible power supply (UPS) to protect the ReadyNAS from power surges and voltage spikes and to keep your system operating in case of a power failure.
- Allow any hot-plug drives and power supply modules to cool before touching them.

- Always keep the rack's front door and all panels and components on the servers closed when not servicing them to maintain proper cooling.

## B. Notification of Compliance

---

### Regulatory Compliance Information

This section includes user requirements for operating this product in accordance with National laws for usage of radio spectrum and operation of radio devices. Failure of the end-user to comply with the applicable requirements may result in unlawful operation and adverse action against the end-user by the applicable National regulatory authority.

This product's firmware limits operation to only the channels allowed in a particular Region or Country. Therefore, all options described in this user's guide may not be available in your version of the product.

### Europe – EU Declaration of Conformity

Products bearing the **CE** marking comply with the following EU directives:

- EMC Directive 2004/108/EC
- Low Voltage Directive 2006/95/EC

If this product has telecommunications functionality, it also complies with the requirements of the following EU Directive:

- R&TTE Directive 1999/5/EC

Compliance with these directives implies conformity to harmonized European standards that are noted in the EU Declaration of Conformity.

### FCC Requirements for Operation in the United States

#### FCC Information to User

This product does not contain any user serviceable components and is to be used with approved antennas only. Any product changes or modifications will invalidate all applicable regulatory certifications and approvals.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### FCC Guidelines for Human Exposure

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

### FCC Declaration Of Conformity

We, NETGEAR, Inc., 350 East Plumeria Drive, San Jose, CA 95134, declare under our sole responsibility that the NETGEAR ReadyNAS OS 6 desktop storage systems comply with Part 15 of FCC Rules.

Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

### FCC Radio Frequency Interference Warnings & Instructions

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following methods:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an electrical outlet on a circuit different from that which the radio receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Modifications made to the product, unless expressly approved by NETGEAR, Inc., could void the user's right to operate the equipment.

### Canadian Department of Communications Radio Interference Regulations

This digital apparatus, NETGEAR ReadyNAS OS 6 Rack-Mount Storage Systems, does not exceed the Class B limits for radio-noise emissions from digital apparatus as set out in the Radio Interference Regulations of the Canadian Department of Communications.

This Class [B] digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe [B] est conforme à la norme NMB-003 du Canada.
